Agrotech Summit 2023: Enhancing Agricultural & Horticultural Productivity

The esteemed Indian Technical Textile Association (ITTA), in collaboration with the National Technical Textiles Mission (NTTM) under the Ministry of Textiles, Govt. of India, and The Synthetic & Art Silk Mills' Research Association (SASMIRA), is proud to present the "Agrotech Summit 2023: Enhancing Agricultural & Horticultural Productivity." This event will take place on Friday, 06th October, 2023 at the India Habitat Centre, New Delhi.

Following the success of our previous conclaves focused on Protective Textiles in November 2022 and Sports Textiles in June 2023, the upcoming Agrotech Summit is the third installment in our series, all of which have received valuable support from NTTM.

This comprehensive one-day event features both a Conference and an Exhibition. Attendees can anticipate enriching sessions covering the scope of Agrotech Products, analysis of the Current Market dynamics, emerging trends in Agrotextiles' exports and imports, the promise of Textile Innovations for future-proof Agriculture, advances in raw material and functional additives, and the latest in Agrotech Technology and Digital adaptation. Moreover, key topics such as Indian Standards, Quality Control Order, Sustainability, and Global Benchmarks in a Circular Economy will be deliberated upon. Panel discussions, inclusive of esteemed experts from these domains and senior officials from various government ministries, promise insightful dialogues and updates on government initiatives promoting Technical Textiles.

The accompanying exhibition offers a platform for leading Agrotech manufacturers, Centres of Excellence (COEs), EPCs, and Trade Associations to display their cutting-edge products and services. This is a golden opportunity for delegates to gain insights into the Agrotech industry and to network with top-tier professionals and government officials.

Looking ahead, ITTA has plans to host a series of similar conclaves spotlighting various Technical Textile sectors such as Automotive Textiles, Industrial Textiles, Medical Textiles, and more.
