Maag Brother Machine Works, the global leader in fabric inspection, at ITMA 2019 in Barcelona

Fabric inspection: A crucial element of any successful textile production

Maag Brothers Machine Works from Switzerland is a globally leading producer of performant machines in the field of quality assurance for the textile industry. Our area of expertise includes fabric inspection, plating, selvedge printing and packaging.

At ITMA 2019, we are proud to showcase our newest innovations in the field of automated visual error detection and IT solutions. Thanks to our new visual technology, Maag fabric inspection machines can now run up to 3x faster whilst becoming even more accurate in error detection. Combined with our optimized human interface tool MaagQTex and the seamless integration of data in our client's ERP systems, your textile production processes will be greatly improved.

At our stand, the specialists from Maag Brothers Machine Works will show you with real life cases from around the world how our new innovative solutions can turn your inspection department into a high-performance service center with up to 100% fault recording guarantee and low personal costs.

June 20th – 26th, 2019, Hall 8.1, Stand A-111

We are pleased to present you the following three innovations:

1. Automated fabric inspection solutions

Our new generation of high-speed inspection systems.

Thanks to the integration of a new automatic camera system, the Maag inspection machines can run up to 3x faster and thus greatly speed up your production processes. And what is equally important, the error detection is improved as well. This new technology effectively supports your factory workers and especially makes 3 shift (24x7) production processes more effective and reliable.

2. Electronic error data recording system MaagQTex

Fully integrated error data recording system for all classical inspection machines with newly developed human interface. Available for inspection and cutting processes, classical inspection and cutting or 2-step solution with cutting optimizing system.

3. Touch free laser length measuring system

A new generation of laser length measuring devices which work completely accurate at fast and at crawling speed!

All three innovations can be integrated in your existing inspection department and most of your current equipment can still be used.

About Maag Brothers Machine Works Ltd.

Maag Brothers Machine Works from Switzerland is a globally leading producer of performant machines in the field of quality assurance for the textile industry. Our area of expertise includes fabric inspection, plating, selvedge printing and packaging.

The family run company represents over 140 years of experience in machine making. For 6 generations now, the Maag family is committed to long-term and trustful client relationships.

Thanks to this long tradition and their outstanding engineering skills, Maag can offer tailormade and highly reliable machines for various different client needs. Outstanding client service and innovative IT and logistics solutions round up Maag's leading product offering.

Our range of products

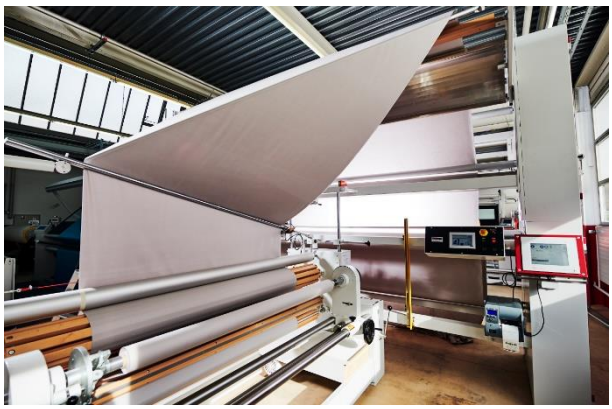

Our experienced engineering team is specialized to design exactly the machine you need in the field of fabric inspection, winding, plating, selvedge printing, and packaging.

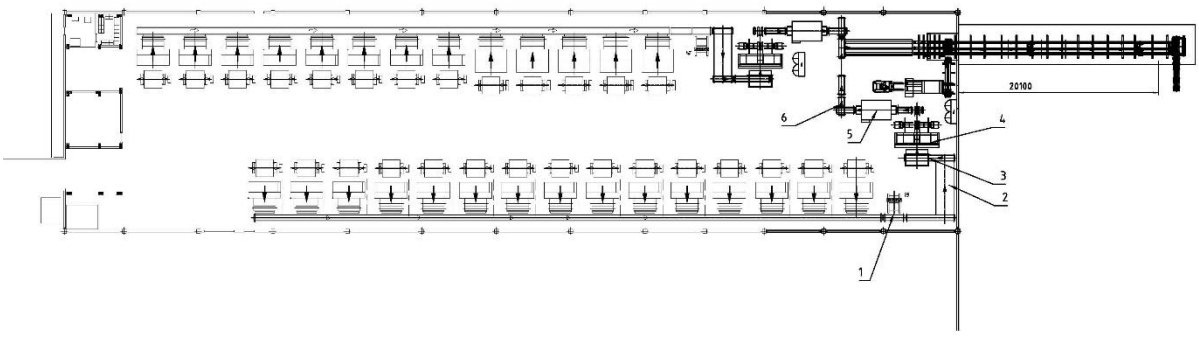

The packing solution system for professionals

Our strongly built packing machines system Colsman & Kirschner are designed to pack your textiles in a simple and reliable way. The traditional and successful machine design has been recently re-engineered to minimize service and maintenance.

Join us at ITMA. We are looking forward to telling you more about this.

Come and see us at ITMA and bring all questions and ideas along.
We will be happy to find the right solution for your company!
