

KARL MAYER

The HKS series gets an upgrade

The width range of the HKS 3-M is extended and production of the HKS 2 is finally stopped

KARL MAYER has two new machines available in its successful, high-speed tricot machine range for the first half of 2019, i.e. a new model with a wider working width is available in the HKS 3-M machine series and the HKS 2 will be entirely replaced by the HKS3-M.

The HKS 3-M has a new working width

The HKS 3-M is a bestseller in KARL MAYER's range of machines. In 2018 alone, roughly 500 machines were sold worldwide. This manufacturer is specifically offering different working widths in its successful machine range in order to optimally meet the requirements of its customers. As well as widths of 186" and 218", an extra-wide machine with a width of 280" has been available since last year. With an HKS 3-M, 238" or 248", as a version with an extended width, KARL MAYER is now bridging the gap between the extra-large model and the next, narrower version. Warp knitting companies can now produce all the latest metre goods with widths of 2 m or 3 m by optimally utilising the machine width – thus guaranteeing maximum production efficiency. A prototype of the HKS 3-M, 238" was successfully presented at the in-house show held at KARL MAYER in Obertshausen to coincide with Heimtextil 2019. The sales release of the HKS 3-M, 238" and 248", was in March 2019.
