

TESTA GROUP QUALITY SERVING THE FUTURE

The Testa brand is considered the equivalent of Ferrari in the production of textile machinery. Innovation, optimization and sustainability are the flags of a company that has cut the ribbon of its first 50 years.

Our effort is also reflected in the search for suppliers that pursue the same path of sustainability, such as the use of biodegradable consumables. For example, our machines are equipped with the necessary precautions to work with bio-compostable plastic film. For Testa, following these guidelines is inevitable for the safety of the planet today.

This experience translates into a targeted production range – 100% made in Italy:

- Nonstop feeding machines for printing machinery
- Inspection machines
- Cutting machines
- Packing machines

High automation, declined in this researched production, is the core business of the company.

HIGH TECHNOLOGY: THE CUTTING PLAN SYSTEM, A SUSTAINABLE SOLUTION

In a contemporary world where more and more effort is demanded to optimize time, space, labor and energy consumption, the right answer on our part seems to be the cutting plan solution. The optimized cutting plan is a new way of working, a philosophy, a revolution in the world of fabric inspection.

The cutting plan works in three steps, which result in the possibility of cutting and packing the fabric rolls at 300 m / min. The heart of such a revolution is the new SuperTestaRossa, a machine that can cut up to 100,000 meters a day.

Optimizing the customer's quality control process concretely reduces waste and increases first quality, granting a rapid payback in relation to the number of meters of fabric produced every day. As result, the possibility of cutting many meters on a single machine reduces the number of machines needed, leading to a significant energy saving.

Furthermore, on our SuperTestaRossa - as well as on the other Testa machines – we mount devices and components supplied by companies for which the theme of sustainability is pivotal, as the effort to make an eco-sustainable process must be at 360 degrees.

One of the mission that Testa brand proposes for the upcoming years is to find new technological innovations and to break new boundaries, in order to cut down the ecological footprint of each machine manufactured.
