Heathcoat Fabrics Limited will continue to grow its sales of high performance fabrics particularly in international markets such as India

Peter Hill, Director of Woven Fabrics
Heathcoat Fabrics Limited
Tiverton Devon EX16 5LL

1) Heathcoat Fabrics in International Market? Heathcoat Fabrics has been exporting to international markets for over 200 years. We do sell our high technology and high performance fabrics in Asia including India.

2)How do you see market for parachute fabrics in International Market? Parachute fabric demand is declining internationally due to the reduction in

paratrooper numbers globally, in turn due to the switch to higher technology battlefield options and the decline of skydiving as a sport.

3) Heathcoat Fabrics plan for the year 2020-2025? We intend to grow our share of declining markets and also to enter new expanding markets globally.

4) Technology Used ? Weaving/Processing and others. Yan processing, warping, weaving, warp knitting, dyeing, finishing and slitting.

5) How do you see Heathcoat Fabrics after Heathcoat Fabrics delivers a soft landing on Mars ? Heathcoat Fabrics Limited will continue to grow its sales of high performance fabrics particularly in international markets such as India. We visit India several times every year as the Indian economy is very dynamic and has some smaller bespoke niche demand where our special high performance fabrics have something extra to offer. Off course for high volume, mass market textiles, India has its own domestic producers.
