

Supertex First To Launch Jointless Aprons In India

Supertex Industries, in this edition of India ITME had launched Jointless aprons, which are technically superior or to other available aprons in the market. Supertex Jointless aprons have not just a Jointless outer layer, but also a Jointless inner layer.

With this new product, the inner layer of the Jointless aprons will never have issues related to Joint separation. Jointless bottom aprons are designed to have thicker inner layer. This increases the lifespan of the product as the inner layer wears over a period of time. Jointless Top Aprons has a thinner outer layer which reduces the strain on the Apron's Outer layer & increases its resistance to Ozone & flex cracking. Jointless Construction of inner layer also ensures uniformity in the yarn quality.

“We invested a lot of time, effort & energy to perfect the latest technology & fabricate these truly jointless aprons. We are the first to introduce this innovation in India,” Said Jugal Kishore

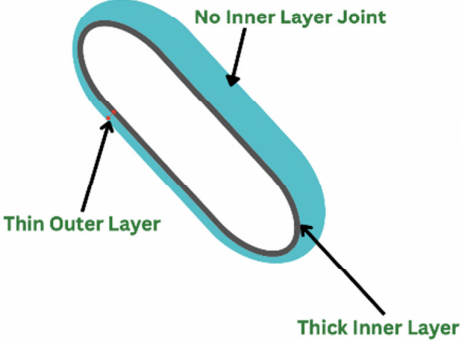

Pansari, MD, Supertex Industries.

One Can hope to see more dynamism & innovations from Supertex.

Supertex We always endeavour to offer the most sustainable innovations aimed at improving the quality of products, to benefit our customers.

Innovation & technology will be the driving forces for the textile industry in the coming future...
