WEAVING

Weaving the Future: Picanol's Next Leap in Smart, Sustainable Weaving Technology

At ITMA ASIA + CITME Singapore 2025, Picanol is poised to redefine weaving excellence with the global premiere of its **OmniPlus-i Connect airjet weaving machine**—a symbol of innovation, intelligence, and sustainability

For over eight decades, Picanol has remained synonymous with progress in weaving technology. Now, as the industry enters a new digital era, the **OmniPlus-i Connect** takes center stage as a milestone in energy efficiency and performance. Its revolutionary **EcoBoost** feature delivers energy savings of up to **1.5 kW per machine**, reflecting Picanol's deep commitment to optimizing productivity while reducing environmental impact. This isn't just technological evolution—it's a statement of purpose: *innovation must empower both industry and the planet.*

Visitors to **Hall 2, Booth C204** will experience four next-generation weaving solutions, each embodying Picanol's mastery in airjet and rapier weaving. Live demonstrations of **PicConnect**, Picanol's intelligent digital ecosystem, will showcase how AI-driven insights and connected tools are transforming mill operations, predictive maintenance, and efficiency monitoring into a seamless, intuitive experience.

From lightweight poplins to high-end sheeting, saree fabrics, and coated technical textiles, Picanol's portfolio at ITMA ASIA + CITME exemplifies adaptability, precision, and sustainability.

Rooted in 85 years of engineering excellence and driven by Tessenderlo Group's philosophy that "**Every Molecule Counts**," Picanol continues to weave together innovation, intelligence, and responsibility—threads that shape the fabric of tomorrow's textile world.

Picanol – where technology meets tradition, and every thread tells a story of progress.
