Flame Retardancy Conference in Berlin: Flame Retardancy for Composite Applications

Following the success of the first two events, the third edition of the conference on flame retardancy will take place in Berlin on 18–19 November 2026, organised by AVK – Industrievereinigung Verstärkte Kunststoffe e.V. in cooperation with FGK – Forschungsgesellschaft Kunststoffe e.V.

The event focuses on the fields of construction, infrastructure and mobility applications. Components made from fibre-reinforced plastics and composites manufactured for these sectors often need to possess specific flame-retardant properties.

Over the course of a day and a half, 15 concise presentations will provide an overview of the latest developments, requirements and innovations in the fields of materials and process development, public transport, sustainability and recycling, construction and infrastructure, mobility, as well as standardisation and testing.

The wide range of presentation topics spans everything from new possibilities for using graphite in halogen-free flame retardants and environmentally friendly flame retardants for natural fibres to innovative applications in local public transport.

Sixteen experts from industry representatives such as Ensinger Composites Schweiz GmbH, Polynt GmbH and Schill+Seilacher ‘Struktol’ GmbH, as well as from institutes such as the Defence Research Institute for Materials and Operational Supplies and the Federal Institute for Materials Research and Testing (BAM), will be sharing their expertise.

The conference program is now available. Registration for the event is now open.
The event will be held in English.
