Trützschler establishes in-depth strategic cooperation with Fujian Leo Group

In a landmark development for the global nonwoven industry, German textile machinery leader Trützschler and China-based Fujian Leo Group have elevated their partnership through a major strategic cooperation agreement signed in Geneva, Switzerland. The agreement covers ten advanced 4.2-meter Air-Through-Bonding (ATB) production lines, reinforcing both companies' commitment to technological excellence, intelligent manufacturing, and sustainable industrial growth.

This collaboration represents much more than an equipment order. It reflects a shared vision to redefine the future of high-performance nonwoven manufacturing through innovation, automation, and long-term strategic trust. The journey between the two industry leaders began in 2022 with the successful installation of the first 3.8-meter back-to-back double carding ATB line. The outstanding performance, operational stability, and premium product quality achieved through that project laid a strong foundation for continuous expansion and mutual confidence.

Before this latest agreement, Fujian Leo Group had already installed nine 3.8-meter Trützschler high-speed ATB lines and one 4.2-meter line. With the addition of ten new 4.2-meter high-capacity lines, Leo Group will operate a remarkable total of 20 advanced Trützschler ATB production lines, creating one of the most sophisticated intelligent nonwoven manufacturing ecosystems in the industry.

The newly signed 4.2-meter production lines symbolize the next generation of nonwoven technology. Designed to meet growing global demand for high-quality hygiene and technical textile products, these systems offer higher productivity, enhanced energy efficiency, superior product uniformity, and intelligent process control. Such advancements will empower Fujian Leo Group to optimize operational efficiency, reduce production costs, and strengthen its competitive positioning in premium nonwoven markets.

For over 130 years, Trützschler has remained synonymous with precision engineering and textile innovation. Headquartered in Germany, the company continues to lead the global textile machinery sector through advanced R&D capabilities, customized solutions, and world-class after-sales support. Meanwhile, Fujian Leo Group has emerged as a dynamic force in the nonwoven materials industry by continuously investing in intelligent manufacturing technologies and aligning its growth strategy with future market demands.

Signatories (from left to right) Mr. Matthias Schemken (Managing Director of Trützschler Nonwovens)，Mrs. MeiLing Chen (Director of Procurement of Leo Group)

Representatives of Trützschler and Fujian Leo Group at the signing ceremony (from left to right) Mr. ZhengYu Hu, (Sales of Trützschler Textile Machinery (Jiaxing) Co., Ltd.) Mr. WeiZhong Zhu (Sales Director of Trützschler Textile Machinery (Jiaxing) Co., Ltd.), Mr. Matthias Schemken (Managing Director of Trützschler Nonwovens), Mrs. MeiLing Chen (Director of Procurement of Leo Group), Mr. Harald Schoepp(General Manager of Trützschler China), Mr. Weiping Zhang (Vice General Manager of Truetzschler Textile Machinery (Jiaxing) Co., Ltd.)

Executives from both organizations emphasized that the partnership is built on shared values of quality, innovation, and long-term industrial development. Trützschler reaffirmed its dedication to providing comprehensive technical support and localized service capabilities, while Fujian Leo Group highlighted the critical role of intelligent production systems in accelerating capacity expansion and product excellence.

The Geneva signing ceremony stands as a powerful symbol of global industrial collaboration and the rapid transformation of the nonwoven sector toward high-end, intelligent, and large-scale production. As both companies deepen their strategic alliance, this partnership is expected to accelerate technological progress, elevate manufacturing standards, and inject fresh momentum into the global nonwoven industry.

In an era where innovation defines competitiveness, the collaboration between Trützschler and Fujian Leo Group demonstrates how strategic partnerships can shape the future of advanced manufacturing and inspire the next generation of sustainable industrial growth.
