Savio Brings Smart Spinning and Winding Innovation to ITMA ASIA 2026

AI, automation and digital integration take centre stage in Shanghai

Savio will spotlight intelligent yarn manufacturing at ITMA ASIA + CITME 2026 in Shanghai, presenting technologies designed to help textile producers improve productivity, quality and operational efficiency. With artificial intelligence, automation and digital integration shaping the industry's future, Proxima Smartconer® and Lybra Smartspinner® will take centre stage.

Proxima Smartconer® is a next-generation winding platform available in configurations ranging from fully automatic and manual feeding to cone-to-cone, Duo Lot and large-bobbin feeding for carded wool. It combines energy-saving features, optimized bobbin flow and AI-powered functions. The web-based Savio Insight system supports real-time production monitoring, remote setup, data tracking and performance analysis. A newly designed, patented suction nozzle aims to improve yarn-end capture while reducing energy consumption. Adaptive tension control, smart metering and intelligent bobbin-flow management further strengthen precision and automation.

Also on show, Lybra Smartspinner® is Savio's versatile air-jet spinning solution, developed for knitting, home textiles and sunshades. Its Multi Blend System feeds two slivers directly into the spinning chamber, where fibres are blended in real time. Manufacturers can change blend composition through the machine PC, streamline preparation lines, reduce costs and create distinctive material and colour blends, including mélange effects.

For visitors, these technologies offer ways to enhance process control, product differentiation and resource efficiency. They can discuss requirements with Savio specialists and assess solutions for their production priorities.

As textile manufacturers seek smarter, more flexible and cost-conscious operations, Savio’s presence underlines the value of combining engineering expertise with intelligent digital tools. Visit Savio at ITMA ASIA + CITME 2026 in Shanghai to discover these innovations, exchange ideas and explore how next-generation winding and spinning technologies can support your business.
